Cen	tral Bohemian Chemical Works (Stredoceske Chemicke Zavody)
7.	
	reorganization of the chemical industry for the purpose of combining a few small plants into an administrative unit. The administrative
	offices were located in Prague until 1951, at which time they were transferred to Melnik /5021N-1429E7, a small town about 20 km. north
	of Prague. The most important plants in this administrative unit
25X1	Both plants were constructed in the 1920's.
25X1	however, much new construction will be done because neither of these
25X1	plants produced goods which were considered to be of great importance to the Czech national economy. Among the items produced by these
	plants were enamels ("fritty" and "glasury"), used in the glass and
25X1	ceramics industries, special glues, bronze paints, and a solution known by the trade name of "Solanka" which was used for preserving
25X1	milk. Solanka was shipped in steel drums; glues were shipped in linen sacks.
	the manager of these Works has been
25X1	replaced by a former worker. the administrative
25X1	deputy was (fnu) FRYDRYCH, formerly a high official in the Society for Chemical and Steel Production (Spolek pro Chemickou a Hutni
	Vyrobu). Although an anti-Communist and considered politically unreliable, FRYDRYCH was permitted to retain his position because of
	his ability as a trade expert in the chemical field.
